

Does the DS4000 Series read waveform (WFM) files from other scopes?

*Date:*04.24.2012

Solution: Many RIGOL scopes can be used to capture data and then have that data transferred and replayed using a DG family of arbitrary waveform generator.

The DG4000 series does not support USB cable transfer of WFM files at this time.

It does support waveform transfer via USB memory stick for the DS1000E/D series and DS1000CA series of scopes.

DS1000B series scopes provide some functionality, but there are errors in the waveform replication.
