

How to display the Virtual panel for UltraScope for the DS1000B in Win8

Date: 07.31.2015

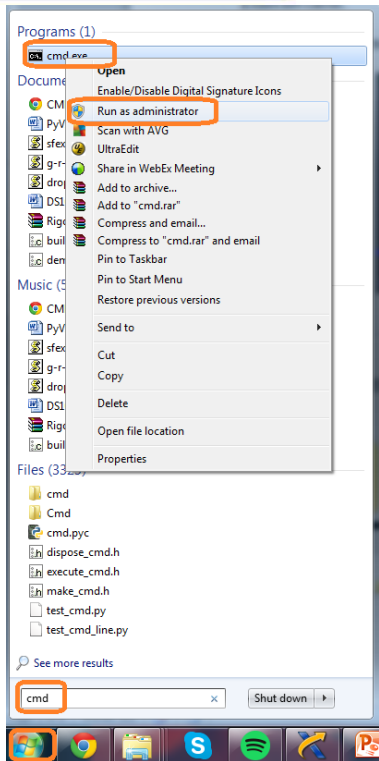

Solution: The Virtual Panel has an ActiveX component (AResButtonPro.OCX), which is not installed successfully in Win8.

To use the Virtual Panel, reinstall the component manually using the following steps:

1. Make sure that you have installed *UltraScope for DS1000B Series*. You can find the latest version on software tab of the DS1000B product page on www.rigolna.com.
2. Power On the oscilloscope and connect it to the computer using the included USB cable.
3. Decompress the file “RIGOL_US_DS1000B_BAT” to the desktop of the computer that you wish to use to control the instrument.

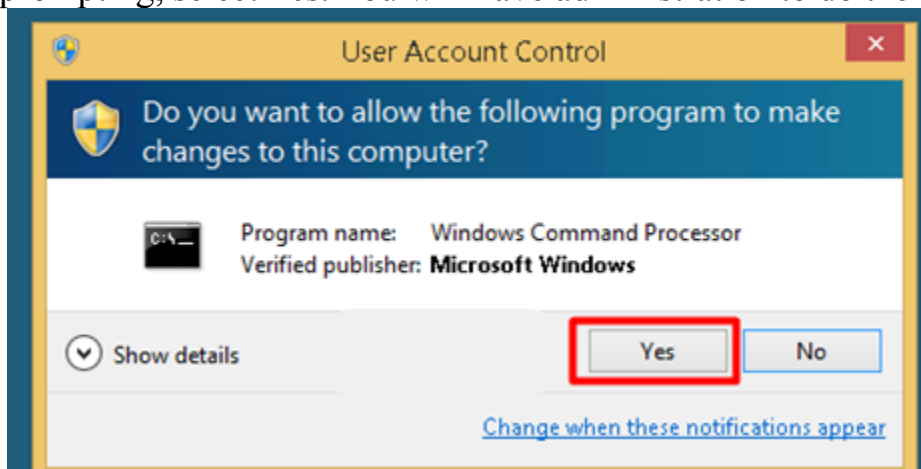

There are two files in the package, the Addin.ocx is the component used in VirtualPanel, the Rigol_Ultrascope_DS1000B.bat is the batch file to install the Addin.ocx.

4. Run the command prompt as administrator (Start > enter CMD > Select CMD.EXE)

Make sure to choose the “Command Prompt(Admin)”.

5. Choose the “Command Prompt(Admin)”, “User Account Control” is prompting, select Yes. You will have administration to do the next operations.

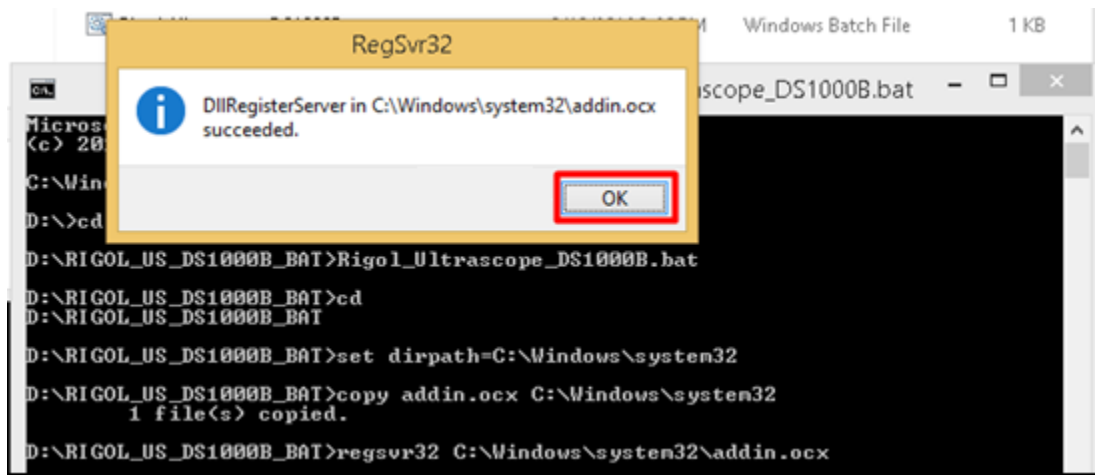

6. Change directory to the `Rigol_US_DS1000B_BAT` by using the `cd` command.
7. Run the `Rigol_Ultrascopes_DS1000B.bat` follow your path.

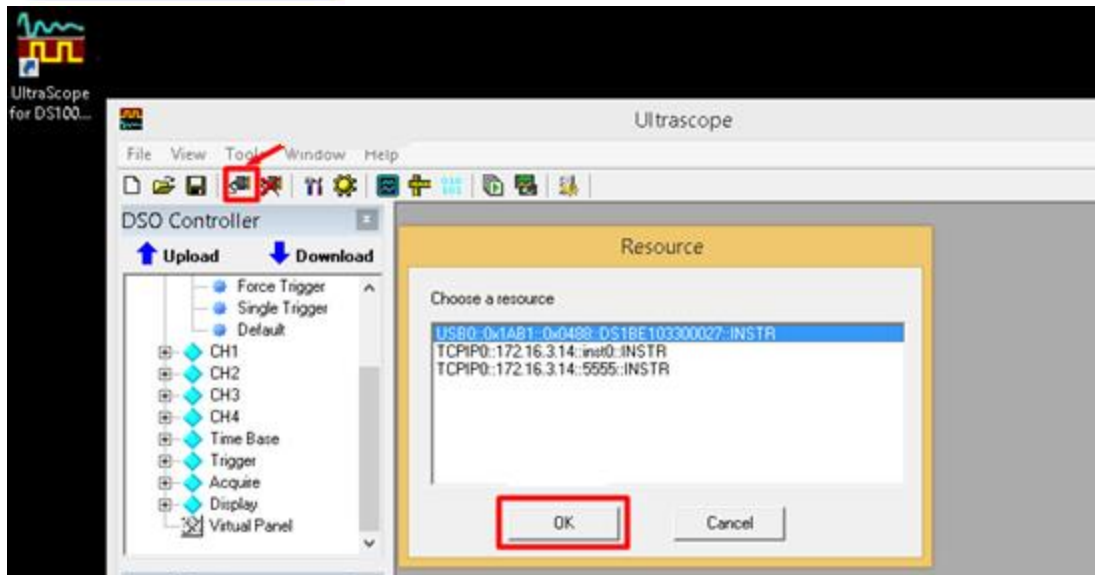

8. The bat will copy the Addin.ocx to the system32 directory, and register it. If there is no error, a “RegSvr32” prompt will indicate success.

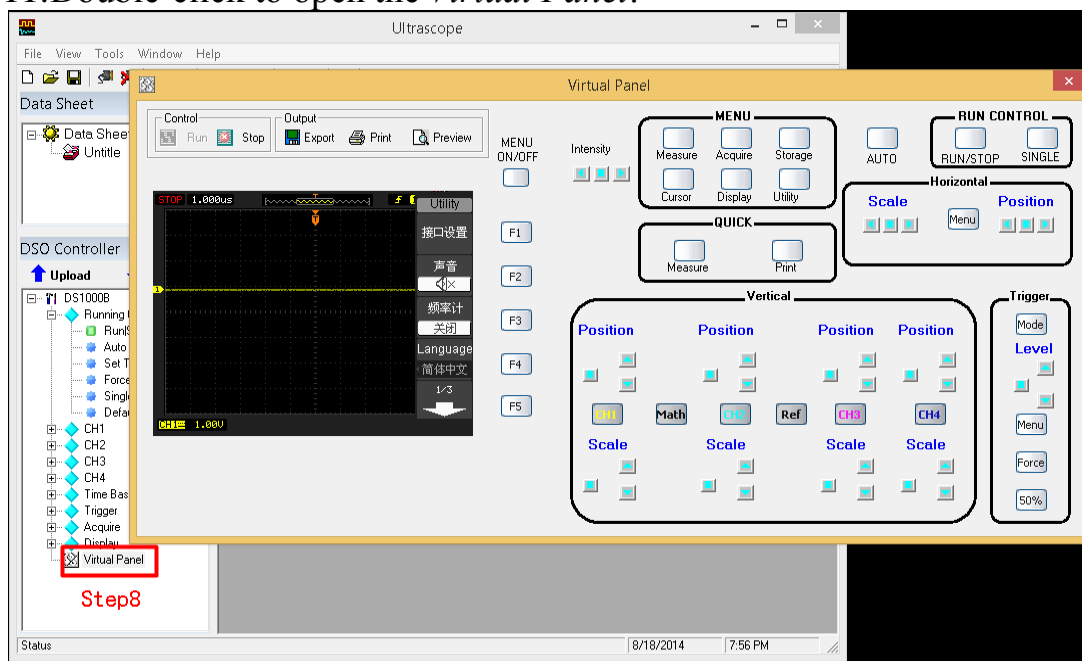

If you are using a 64 bit OS. You will need to manually copy and register AresButtonPro.ocx to SysWOW64

9. Restart your computer.
10. Run the UltraScope for DS1000B Series and connect with oscilloscope.

11. Double-click to open the *Virtual Panel*.
